Close to the city, nature, archipelago, jobs...

City development and urban planning

- Overall objective – a carbon neutral Sweden by 2050
- What can we do?
- City development and urban planning plays a key roll if sustainability is the focus of what we do
- Combining rapid growth with preserving the environment
 - How do we build?
 - How do we get around – how do we solve the transport challenge?

PRT part of the solution

The ongoing job to create a new master plan for city development in Tyresö – that will lead to a new plan being adopted in 2016 and reach to 2030 is ongoing

We have made 3 pictures of the future and had a good dialogue with the public. Now the pictures are coming together to one and transport is a key issue. Today there are only busses to Tyresö.

In the region we are expanding the metro network and also different kinds of heavy and light rail but we are the end of the line so unlightly that it will ever be cost effective to expand that to us.

A PRT system is one solution that we are looking at both internally in Tyresö and to connect to transport hubs in southern Stockholm. A study has been done where a possible network was investigated.
